Non Conformity

Analysis of the Non Conformities represents one of the most important dashboard for Quality Measurement and continuous improvement.

Even a correctly implemented Quality System can generate non-standard or faulty products, materials, services or components.

The **Non conformity management Module** allows to analytically record each event in which the specified requirements were not met, according to what is provided by the regulations.

This module represents the core of the Quality system due to its high level of integration with all the other aspects of Quality Control and Assurance.

Subscription

- Guided surfing through the catalogue;
- Guided liability identification;
- Simplified data entry functionality with configurable features;
- Searching previous 'similar' Non Conformities;
- Printing the subscription to be sent to the person in charge;
- Integration with Corrective actions and Costing;
- Possibility of recording several comments at different levels;
- Integration with fax or e-mail managing system for transmission

Analysis

- Zoom down search engine;
- Full surfability according to different aggregation methods (date, factory, division, family, article, supplier, fault, etc.);
- Data export in Excel® to be examined and re-processed by the user;
- Graphics.

Planning

From any point of the **Quarta®** system, it is possible to feed the Non Conformity container that becomes the privileged place from where to obtain, through statistic analysis, indicators on the trend and on the costs of non-quality and of derived actions.

- Various types of Non Conformity: System, Acceptance, Production, Final Inspection, Return, Complaint, etc.;
- Completely configurable non conformity classification of by means of a hierarchical catalogue with several levels (faults, causes, etc.);
- Alarm management;
- Completely configurable Workflow of Non conformity document.
