Quarta® Costing

The economical aspect of the Quality System is surely one of the top priorities: analytical registration of the different cost types.

The purpose of reworking, repair, return processes etc. of a product or of its components is to restore the specified requirements. They can eliminate Non Conformities; in any case they imply additional costs.

This module allows the analytical recording and the analysis of quality and non-quality costs.

With this tool highly integrated with the other application modules (especially Non Conformity but also Corrective actions, Acceptance, Audit, etc.) it is possible to obtain a precise documentation of the costs borne, with subsequent charge to the body manager.

Software facility

- Cost details with configurable cost items: (scrapping, reworking, internal or external repair, etc.);
- Possibility of setting unit costs for human resources and materials; Cost liability assignment (to internal or external bodies);
- Management of general expenses;
- Direct connection with other Quality documents (Non Conformity, Corrective actions, etc.);
- Bill shipping data: sendee, date, method of payment;
- Integration with e-mail and fax server;
- Management of the document status and Workflow (Creation, Approval, Purchase Department, Cost Department, Closed, etc.).
