Quarta® Risk Assessment

In compliance with law obligations of **Lgs. D. 626/94** concerning health and safety in the Work Environments, this module offers an analytical tool for identifying the prevention measures and the intervention priorities for the control and planning of the improvement of business safety.

An efficient approach to the Safety Management System consists in the strict identification of dangers and corresponding risks.

This allows their proper assessment, detailed by task and place, aiming at a better risk understanding and a more aware reply strategy.

First of all, the module allows to identify the dangers and the exposed subjects, identifying the tasks concerned and preparing the relevant single protection devices (DPI).

Each risk factor is related to a risk assessment matrix.

Software facility

- **Basic files** (dangers, classes, centres, categories and risk factors, single protection devices);
- **Risk assessment matrixes** (interpretation methods, thresholds);
- Identification of a **global index of exposure to risk** by tasks;
- Calculation of the **accident risk index**;
- Calculation of the **disease risk index**; **Activity planning**;
- Management of the **corrective measures**;
- **Printing** the dossier, with the possibility of configuring each section to be printed;
- Powerful integration with other modules of **Quarta®** (Human Resources, System Maintenance, Document Management, Designing).
